Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "I need accurate predictions for planning." • "Manual analysis takes too much time." • "I want reliable insights before making decisions." •	THINKS • How can I accurately predict a country's HDI? • Which factors have the greatest impact on human development? • How can data help in making better policy decisions?
PERSONA NAME <i>Development Analyst</i>	
DOES • Collects data on health, education, and income. • Analyzes reports and development indicators. • Uses prediction results to support planning and resource allocation.	FEELS • Concerned about making the wrong policy decisions. • Frustrated by complex and time-consuming data analysis. • Confident when accurate, data-driven predictions are available.
